## Marine Valves & Actuators

We supply a comprehensive range of valves & actuators for use in the offshore & marine industry. We select our products from a range of leading manufacturers, and base our offerings on performance, reliability, quality and economy.

This leaflet highlights a few of the more popular products.

### **Bestobell Valves**

The Birflo range of valves is used specifically for flow control of water based media, using two main valve types, Constaflo and Truflo.

The TRUFLO functions by diaphragm action brought about by a change in differential pressure created by a flow through a calibrated nozzle. The movement of the diaphragm is used to operate a microswitch.

The CONSTAFLO is a simple water flow controller using a patented device that ensures the maintenance of flow rates within +/- 10% of its rated capacity when operating within the limits of temperature and pressure specified.

### **Damcos** (previously known as Superfos & Danfoss A/S)

The Damcos Valve Remote Control (VRC) system sets the standard for the marine industry, and we offer both a hydraulic and an electro-hydraulic version.

Both are complete one-step solutions that reflect a deep appreciation of marine customer needs and industry standards.

- Actuators
- Control Blocks
- Indicators
- Local Power Units
- System Power Units
- Hand Pumps
- Solenoid Valve Modular Cabinets
- Manifolds & Accessories
