

JOHN GJERDE™

Specialists in maritime tank venting technique

Seawater / Fuel filter

The seawater and fuel strainers are produced in welded steel and can be delivered with different working pressures, maximum value of 64 bar!

The basket filters inside the strainers are made from stainless steel.

The seawater strainers are protected against corrosion by a hot dipped galvanizing process to guarantee a long life cycle and the fuel strainers are standard delivered in "black steel".

We have a long experience designing and manufacturing these devices, enabling us to deliver the strainers tailormade in a variety of sizes and executions.
